

Apna Mandi: The Operating System for India's Street Food Economy.

Digitizing staffing, sourcing, trading, and heritage IP for 10 million micro-entrepreneurs.

Pitch Deck - Nirmaan Pre incubation

A \$41B macroeconomic engine running entirely on memory, cash, and word-of-mouth.

**10
Million**

Vendors

Representing ~14% of total urban informal employment.

**\$41
Billion**

Economy

Generating ~₹8,000 crore in daily street-vending trade.

**Zero
Digital**

Infrastructure

No structural access to formal sourcing, dynamic labor, or scaled IP monetization.

The daily operations of a street food vendor are profoundly vulnerable and fragmented.

A single, mobile-first ecosystem digitizing the vendor bottom-up.

Modules 1 & 2: Creating hyperlocal liquidity for labor and perishables.

Karigar Connect

Real-time, location-aware gig matching for specialized kitchen help. Taps into a blue-collar gig workforce projected to reach 23.5M by 2030.

Vendor Exchange

Peer-to-peer barter and trade marketplace. Eliminates perishable waste and covers immediate shortfalls without waiting for a full supplier order cycle.

Modules 3 & 4: Providing B2B procurement leverage and a first-of-its-kind cart-to-brand pipeline.

Supplier Procurement

Transparent deal discovery, digital cart checkout, and structured order history for raw materials.

Virasaat (Heritage Commerce)

Turns oral tradition into branded, packaged IP. Connects vendors directly to India's rapidly growing D2C blended spices market (valued at \$941.9M).

The bundling creates inescapable network effects and eliminates cross-acquisition costs

A rare convergence of government formalization, tech penetration, and consumer behavior.

Regulatory De-Risking

PM SVANidhi scheme targets 11.5M formal vendor profiles by 2030. Under 2026 reforms, vendors registered with a local Town Vending Committee (under the Street Vendors Act, 2014) are deemed registered for FSSAI — eliminating a core compliance step for vendors already reached

Digital Readiness

Rising blue-collar smartphone penetration and DPDP-compliant digital identity frameworks (OTP/Aadhaar) enable secure, rapid, and scalable app adoption at the street level.

Consumer Demand

D2C heritage and regional food brands are experiencing 25%+ YoY growth, perfectly priming the market for Virasaat's authentic cart-to-brand storytelling pipeline.

Tapping into multiple compounding billion-dollar macro-markets.

Adjacent spaces have minted unicorns, but no platform serves the vendor holistically.

Competitors are single-purpose and lack hyper-local urgency. Apna Mandi acts as the all-in-one OS, consolidating the fragmented ecosystem.

Capability	Apna Mandi	Udaan / Jumbotail	WorkIndia / Apna	OLX	D2C Brands
Gig Staffing					
B2B Sourcing					
P2P Trade					
IP Monetization					

The Cluster Playbook: Winning ground efficiently through hyperlocal density

1. Karigar-First Supply Seeding

Onboard skilled kitchen labor before vendors to ensure immediate liquidity and utility on day one.

2. Anchor Virasaat Brands

Launch 3-5 hero vendors with famous local recipes to create social virality and PR hooks.

3. Ecosystem Partnerships

Deploy on-ground community managers leveraging NASVI and SVANidhi networks to bypass digital trust barriers and accelerate onboarding

Stacked multi-module adoption drives superior unit economics

A highly conservative blended ARPU of ~₹4,840/vendor/year, compounding as vendors adopt more modules.

~₹4,840 / year

Layer 4: Virasaat

20% revenue-share on branded D2C product sales.

Layer 3: Supplier Procurement

5% platform fee on B2B wholesale orders.

Layer 2: Vendor Exchange

8% transaction fee on completed peer-to-peer perishable trades.

Layer 1: Karigar Connect

15% take-rate on completed gig transactions.

Illustrative model based on assumed take-rates and usage frequency — to be validated against pilot data.

A capital-efficient path to city-level profitability and venture-scale revenue.

Micro-Economics

Direct fixed costs per city (community ops/marketing) average ₹15 Lakh/year. At ~₹4,350 contribution margin per vendor, a city achieves direct break-even at just ~345 active vendors.

Macro-Economics (Year 3 Snapshot)

Reaching 120,000 active vendors across 5-7 cities generates ~₹70 Crore in blended revenue, easily absorbing central engineering and G&A overhead.

Projections based on modeled assumptions; product is pre-launch with no live transaction data yet.

The exact blend of engineering pedigree and informal-economy credibility.

Rahul Sharma
CEO & Product

Prior exits in B2B marketplaces;
deep technical expertise in scaling
multi-sided network ecosystems.

Priya Desai
COO & Community

Former leadership at major gig-
economy platforms with direct,
proven relationships inside NASVI.

Ankit Patel
CTO & Architecture

Specialist in deeply compliant,
high-availability mobile infrastructure
and FSSAI frameworks.

Execution Proof: The team has already shipped a working frontend SPA prototype (React/Tailwind) with integrated multi-module routing, demonstrating rapid, uncompromising shipping velocity.

Join us in bringing 10 million micro-entrepreneurs into the digital age.

Pitch Deck for Nirmaan Pre Incubation, IIT Madras

Engineering & Product

Migrating the SPA prototype to a production-ready, DPDP-compliant backend infrastructure.

City 1 Cluster Ops

On-ground community managers and Karigar liquidity seeding for the initial Mumbai corridor launch.

Regulatory Structuring

Finalizing FSSAI facilitator frameworks and Virasaat logistics pipelines.
