

Apna Mandi

A Unified Operating System for India's Street Food Economy

1. Digitizes the informal street commerce ecosystem in one platform.

2. Connects 10 million vendors with labor, suppliers, and a global customer base.

3. Transforms generational oral recipes into monetizable, branded IP.

The Architects of the Informal Operating System

Arjun Mehta

Chief Executive Officer (CEO)

Ex-Swiggy Marketplace Lead; 2nd-generation street food entrepreneur with deep grassroots ties.

Priya Sharma

Chief Technology Officer (CTO)

Former Architect at Flipkart; renowned expert in offline-first, highly scalable mobile infrastructure.

Rohan Desai

Chief Operating Officer (COO)

Ex-Dunzo Operations Head; successfully scaled hyperlocal gig delivery networks across 15 tier-1 cities.

Kavita Iyer

Chief Marketing Officer (CMO)

Built national D2C heritage spice brands at Paper Boat; strong direct relationships with local vendor associations.

Turning 10 Million Invisible Carts into Scalable Enterprises

The Vision

To become the financial and operational infrastructure for 10 million invisible micro-businesses, turning every street cart into a scalable, inheritable, and dignified enterprise.

The Mission

To provide an integrated OS for India's informal street food vendors—formalizing operations, solving daily friction, and bridging the gap to formal credit.

The Friction of Operating on Cash and Memory

Current State: Cash & Chaos

Manual Staffing: Hiring specialized kitchen help (e.g., a wok master) relies entirely on slow, word-of-mouth networks.

Wasted Inventory: Perishable surplus spoils on slow days while neighboring vendors face urgent shortages.

Opaque Procurement: Fragmented, blind negotiation with wholesalers blocks price discovery.

Undocumented Recipe IP: Generational secret recipes build local fame but die with the physical cart.

Financial Invisiblility: Cash-based operations completely block access to formal credit and insurance.

Single-Vertical Unicorns Cannot Solve Horizontal Chaos

Whitespace Comparison Matrix					
	Hyperlocal Urgency	Micro-Procurement	Kitchen-Specific Gig Matching	Perishable Bartering	Recipe IP Monetization
Apna Mandi	✓	✓	✓	✓	✓
Udaan / Jumbotail	○	✓	○	○	○
WorkIndia / Apna	○	○	✓	○	○
OLX / WhatsApp	○	○	○	✓	○
D2C Brands	○	○	○	○	✓

B2B giants (Udaan) lack vendor-specific urgency and labor matching.

Gig platforms (Apna) cannot handle same-day, skill-specific kitchen shifts.

D2C brands monetize heritage stories, but don't share upside with the original creators.

The First Unified Mobile Ecosystem for Street Commerce

Digital Gigs:
On-demand hiring

User Ecosystem

Macro Tailwinds Unlocking a Bottom-Up Flywheel

The Macro Tailwinds

The Ecosystem Advantage

The Moat: Apna Mandi captures cross-module network effects and generates an alternative credit profile (the 'Vyapaar Score').

A Feature Set Designed for the Urgency of the Streets

The Invisible Layer (Bolo Mandi): Multilingual voice-to-action commands allowing low-literacy vendors to use the app hands-free during rush hours.

An Offline-First Architecture Powered by Edge AI

The OS Stacking Effect: Compounding Unit Economics

Karigar Connect:
15% commission on
completed gig payments.

Vendor Exchange:
8% transaction fee on
hyperlocal perishable trades.

Deal Discovery:
5% take-rate on
vendor-supplier
procurement volume.

Virasaat:
20% revenue share on
branded heritage products
sold nationally.
